

Minerals for Atomic Energy (Classic Reprint) (Paperback)

Filesize: 6.01 MB

Reviews

Comprehensive guideline for ebook fans. I have read and i am certain that i am going to going to go through yet again yet again down the road. You wont truly feel monotony at whenever you want of your own time (that's what catalogs are for concerning when you check with me).

(Keegan Abernathy)

MINERALS FOR ATOMIC ENERGY (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Minerals for Atomic Energy When the curtain of secrecy was first lifted from the atomic energy program, much was written about the large amounts of energy that could be theoretically produced from uranium and other radioactive elements. It was soon a widely held opinion that this huge atomic program was based on very small quantities of uranium worth fabulous sums. A review of the technical literature also revealed that uranium was very widely dispersed throughout the earth's crust and that almost all natural substances exhibited some radioactivity. Quickly the idea spread that almost anyone had a chance to get rich quick by finding uranium, literally in his own back yard. Although founded on a basic misconception, this boom did serve a useful purpose in arousing public interest in the search for uranium. In spite of the fact that uranium is not consumed in amounts comparable to iron, copper, or lead, its need is measured in tons rather than pounds, and the demand for it is greater than the presently available supply. During the first three years of its existence, the Atomic Energy Commission received more than 15,000 inquiries and more than 20,000 samples representing practically every natural substance (and some that weren't natural). Many of these inquiries concerned the back yard possibility, and many of the samples came from back yards. Other questions revealed equally serious misconceptions concerning the properties of naturally radioactive substances. Among other things, radioactivity from supposed deposits of uranium was blamed for making cows lose their hair, stopping watches, and for causing burns, fires, and a ringing in the ears. Other questions, however, were quite sound and to the point: I have pitchblende on...
