TETRASPANIN2 IS A CANDIDATE FOR COMPENSATION OF PLP FUNCTIONS

To download **Tetraspanin2 is a candidate for compensation of PLP functions** eBook, please follow the hyperlink under and save the ebook or get access to other information which might be relevant to TETRASPANIN2 IS A CANDIDATE FOR COMPENSATION OF PLP FUNCTIONS book.

GRIN Verlag GmbH. Paperback. Condition: New. 20 pages. Dimensions: 10.0in. x 7.0in. x 0.1in. Internship Report from the year 2012 in the subject Biology - Neurobiology, grade: 1, 3, University of Gttingen (Max Plank Institute for Experimental Medicine Department of Neurogenetics), language: English, abstract: Tetraspanin2 (Tspan2) is a member of the tetraspantransmembrane4 superfamily restricted to the nervous system. The abundance of Tspan2 is low in physiological condition but increases greatly in myelin of PLP-deficient mice which may indicate its compensatory functions. Our experiments show that Tspan2 has no effect on delay of myelination at P14; young and old mice lacking Tspan2 has the same g-ratio as wild type. However, the quantity of unhealthy axons and axonal swellings are higher in aged animals lacking both PLP and Tspan2 than in single PLP knockout. Furthermore, the absence of PLP causes the decrease in the number of axons and rise in axon diameter; lack of Tspan2 alone leads to decrease in quantity of 0.4-0.7 μ m diameter axons in 40 weeks old mice. These findings point to a possible auxiliary role of Tspan2 in support of axonal transport and long-term axon preservation in PLP null condition. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
